Service-stop of electronic controls – first generation for Jakob Müller machines.

BARCO control: E48.230/01
EPD control: E21.002C

Dear Sirs,

The sourcing of certain components for machines with electronic control systems of the first generation, BARCO and EPD, is no longer possible. These machines have been out of production for more than 20 years.

Jakob Müller AG will therefore terminate the support of these old control systems with immediate effect.

Affected machine types of service discontinuation:

Machine with BARCO control:

- NFRE machine with production year before 1991
- NCE-ELS or SNOB with production year before 1989
- NF-ELS with production year before 1995
- NFR, NFJQE

Machine with EPD control:

- NFJM with production year before 1988
- NFJK with production year before 1990
- NF-ELS with production year before 1995
- MVC with production year before 1990

Mechanical parts for the above mentioned machines are still available, as long as they are identical to the ones used in the same type of machine built at a later year.

In case of any question, whether one of your machines is affected, our help desk (ce.jmf@mueller-frick.com) will be glad to assist you.

This message will be distributed at Newsletter and JM-Homepage in week 24

Regards

Jakob Müller AG, Frick (Switzerland)
